

Gist of expert neurologist report supplied in support of HN125's application for restriction order over real and cover name

Dated 23/5/17 written by a Consultant Neurologist responsible for treating N125

The neurologist's opinion:

HN125 has been suffering from an incurable progressive medical condition for more than 35 years. There has been a definite deterioration in recent years. There is no doubt that stress has a seriously adverse affect on HN125's condition and would cause relapse and deterioration of the condition.

If HN125's name was to be disclosed, then the stress could potentially seriously affect health with the condition and this could be quite disastrous. HN125 has been put under a lot of stress recently.

The neurologist does not believe that HN125 is well enough to provide a witness statement and, if forced to, the repercussions will affect N125's health and seriously reduce any chance of wellness in the foreseeable future.
