

### **EN291 – Gist of Dr Busuttil's Report**

Dr Busuttil met with EN291 in April 2017. His opinion at that date was that EN291 had had significant diagnosable chronic mental illness for a number of years. The report also refers to medical records confirming that EN291's GP had diagnosed mental illness some years earlier.

Dr Busuttil noted that EN291 had received significant treatment and was continuing to receive treatment. Dr Busuttil gave the opinion that EN291's mental illness currently needs further treatment.

It was Dr Busuttil's opinion that should EN291's identity be disclosed that this would exacerbate EN291's chronic mental illness and may increase the risk of suicidal ideation and may even precipitate a suicidal act.
